**TO ALL EXEC BUILDERS**

**EXEC ADVISORY SERVICE BULLETIN A-05**

History: RotorWay International has determined that the tail boom attachment brackets withstand considerable structural loads, and has designed and tooled new tail boom attachment brackets to provide improved structural strength between the airframe and tail boom.

Action: Installation of these new brackets, part number E09-3221 (upper) and E09-3231 (lower), is strongly recommended for all EXEC airframes. These brackets, formed from 7/8 inch diameter tube, feature a non-linear transition from round to flat and an inserted .063 strap stiffener.
